DETAILED ACTION

Response to Arguments

1. Applicant's arguments in reference to claims 1, 3-8, and 12-14, filed June 27th, 2003 have been fully considered and are persuasive.
2. In response to applicant's argument in reference to claims 9, 15, 21, 24, and 28, that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., a heater constructed and arranged to supply thermal energy to the liquid coolant in combination with a pump) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). However if the applicant amended claims 9, 15, 21, 24 and 28 to include a heater in combination with a pump, the application could be considered allowable upon a further search by the examiner.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 9, 10, 15, 17, and 24-27 are rejected under 35 U.S.C. § 102(b) as being anticipated by Phillips et al. US Patent No. 5,587,880.

Phillips discloses the claimed invention except for a control connected to the heater to maintain the coolant at an optimum temperature for evaporation by the evaporator. It would

Art Unit: 3743

have been obvious to one having ordinary skill in the art at the time the invention was made to include control connected to the heater to maintain the coolant at an optimum temperature for evaporation by the evaporator, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Claim Rejections - 35 USC § 103

1. Claims 21, 23 and 28-30 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Phillips et al. Phillips et al. discloses applicant's invention as claimed with the exception of a specific recitation of the amount of liquid within the heat pipe. The amount of liquid charged with a heat pipe system is completely dependent on the heat load of the heat source that the heat pipe will be used to cool. It would be obvious to fill the heat pipe up to 90 with liquid refrigerant or any other amount depending on the load to be cooled. Also to put the elements of the heat pipe cooling system in the form of a kit would have been an obvious arrangement since lacking any other critical aspects of the putting the separately claimed elements in a kit has been long settled to be an obvious configuration.

Allowable Subject Matter

1. Claims 1, 3-8, and 12-14 allowed.
